Job Application for Java Software Developer

Dear Ms. Komitsch,

About Me

I did a Bsc in Mechanical Engineering and later on did a Msc in Simulation Sciences. While doing my MSc I got more and more interested in Math and Computer Science and decided to go into that direction completely. I spend my spare times mostly reading and playing Badminton

Why mgm-tp GmbH?

As Martin explained in the Bonding event mgm-tp is providing software solutions to other companies. It was great to see that the said solutions actually made it and are operational which shows integrity and resolutions within mgm-tp. Later on when I was doing some reading on different aspect of the company, I was pleased to find out that mgm-tp is an experience player on the field that passed the test of time and is probably here to stay. Extensive branches within Germany make it ideal for adventurous souls who want to move around but stay within the same company. Other statistics about the revenue and the number of employees only reassures me about my choice regarding mgm-tp.

Why Me?

I am a super flexible person which I think is crucial in the changing world of software. If suddenly by necessity mgm-tp decides to start doing things differently say migration from Java to Rust/Carbon I would be able to adapt quickly. Part of my flexibility is coming I guess from my MSc studies. Every professor had their own way of managing their workflow and programming tasks which gave me in turn the opportunity to become a polyglot in Programming Languages. I generally can learn scripting languages like Bash in matters of days and learn compiled and more serious languages in matters of weeks. I have a can-do attitude and combined with my English, googling and Math skills I can overcome any obstacle that comes my way.

Sincerely,

Ali Darijani
